

Chancellor

Office collection

Chancellor

The seat structure and arms are created from birch plywood with internal poplar reinforcements. The backrest is bent beech plywood with solid beech reinforcements. Comfortable and welcoming, Chancellor is polyurethane foam padded with different densities for the greatest comfort zones, and with a polyester wadding quilted covering. Chancellor is available in 3 different versions: President, Executive and Visitor. In the President and Executive versions, the five-spoke resting base, which is available either in polished aluminium or a dark grey finish, is fitted with soft, self-braking 'W' type wheels that adapt to all types of flooring. The Visitor version has a 4-spoke base with swivel plastic glides that are, on request, also available for other two versions. Upholstery is provided by soft Pelle Frau® leather from the Color System, and can also be extended to the protective covering of the 'Synchron' movement. The President and Executive versions are height adjustable, rotate, and are fitted with a 'Synchron' turning mechanism for seat and backrest, that allows the armchair to easily accompany the body's movements, thereby guaranteeing extraordinary comfort. It boasts a continual series of 5 different positions ranging from an erect sitting position and transforming it gradually into an actual chaise-longue. To turn, sit on the chair and pull the lever beneath the seat to the left-hand side, pushing back on the backrest to unblock the chair. Use the knob located at the centre, underneath the seat, to adjust turning strength: by turning clockwise, resistance increases, by turning anti-clockwise, it will lessen. To block the backrest in the desired position, press the left-hand lever once again. Chancellor Visitor is fitted with an automatic return rotation mechanism provided by a resistant bearing, which allows the armchair to rotate and return to its original position.
